

## Speaker Bio and CV

### Event Title

**Data Analytics – Excel for Auditors**

### Time and Location

**Thursday 18 May 2023 – IIA Budapest (virtual event)**

### Biography

Mark started his career in 1991 in the financial sector as IT specialist in PCs, servers, mainframes and international networks. He has also spent many years as an analyst and programmer and knows the IT world inside-out.

In 2005 Mark made the switch to Internal Audit, as an IT auditor. A few years later he became a policy officer, responsible for the training of auditors worldwide, as well as for the continuous improvement of the audit methodology, based on the IPPF International Standards.

In 2010 Mark joined the Board of Directors of IIA Belgium, where he also temporarily served as president of the executive committee. Especially the activities of the Education Committee, the Quality Assurance Committee, the Advocacy Committee and the Digitization Committee remain close to his heart. After many years, he left the Board in 2021.

From 2015 onwards, Mark specialized in the digitalization age, by mapping the various disruptive technologies and their impact on business processes, and explaining them to the international auditor community.

From 2020, Mark embarked on the path of cyber security. He joined a European ESF project with the objective of better securing the local SME market against the ever-changing world of cybercrime.

Today, Mark is again active in the IT sector, and has close ties with IIA Belgium and ISACA, for which he regularly provides local seminars and training courses, as well as offering seminars across the globe.
